BENEFITS

2Xfaster with incremental
backups**49%**lower cost than
other vendors**4.8 STARS**average rating for saving
time and money**15 STORAGE**destinations for increased
redundancy and security**4,000**recovery points per backup job for
more flexible and precise recovery**5 MINUTES**for solution deployment
and setup

MICROSOFT 365 IS NOT IMMUNE TO DATA LOSS

Although Microsoft is responsible for maintaining the security and availability of its infrastructure, backing up customer data in Microsoft 365 is the responsibility of the customer alone. To avoid losing critical data and ensure compliance with legal requirements, you need a dedicated backup and recovery solution for Microsoft 365.

NAKIVO Backup & Replication delivers all-in-one backup, instant granular recovery and ransomware protection for Microsoft Teams, Exchange Online, OneDrive for Business and SharePoint Online data.

With robust data protection, secure archiving and streamlined compliance features, the solution helps you maintain uninterrupted operations and data availability in any scenario.

TOP REASONS TO BACK UP YOUR MICROSOFT 365 DATA

Human error

The leading cause of data loss, human error (e.g. accidental deletion) can cause irreversible damage that could be easily prevented with Microsoft 365 backups.

Cybersecurity threats

Advanced ransomware variants that specialize in cloud data are on the rise, and insider threats can be just as dangerous to critical data.

Complicated retention policies

Native Microsoft 365 retention policies are not a substitute for backups, and they are commonly misinterpreted and misused.

Regulatory pitfalls

Organizations can face serious legal penalties if they fail to submit data to regulatory or judicial bodies in a timely manner.

Complex data architecture

Microsoft 365 data is diverse, dynamic and interconnected across apps, which can make manual backup a slow, error-prone and costly endeavor.

ACHIEVE YOUR BACKUP AND RECOVERY GOALS

“ We’ve been backing up **2,500 Microsoft 365 user accounts** for over 2 years. We appreciate the enterprise feature set that enables us to protect and recover Microsoft 365 and our on-prem VMware environment from a single pane of glass.

Robin Damen, CEO at Virtual Computing

“ We chose NAKIVO for Microsoft 365 to back up our **110 mailboxes**. The possibility to recover entire mailboxes, selected files, and folders in case of deletion is the main advantage.

Lars Weimar, Head of IT at HAM Precision

“ We **pay a minimal amount** per user for one year, and we are very happy that all Microsoft 365 applications are protected. When needed, technical support is fast and can be reached via an online chat.

Omer Akosman, Information Technology Manager at Ottoman's Life Hotel Deluxe

REACH THE FULL POTENTIAL OF MICROSOFT 365 BACKUPS

Complete protection

Create full and incremental backups of data residing in Exchange Online, SharePoint Online, OneDrive for Business and Microsoft Teams from a single pane of glass.

Diverse storage targets

Store backups in local folders, SMB/NFS shares, public cloud storage platforms, S3-compatible storage targets and deduplication appliances.

Direct backup to cloud

Send Microsoft 365 backups directly to Amazon S3, Wasabi, Azure Blob, Backblaze B2 and other S3-compatible object storage targets.

Backup copy

Create and automate the creation and movement of backup copies offsite (tape, cloud platforms, and other S3-compatible storage) or to other locations.

Ransomware-proof backups

Protect against encryption by ransomware with immutable backups in local, cloud and S3-compatible storage locations and air-gapped backup copies on tape.

Instant granular recovery

Restore Microsoft 365 items to the original or a different account in seconds – emails, attachments, folders, files, In-Place Archive mailboxes, Litigation Hold items, sites, channels, etc.

MICROSOFT 365 DATA PROTECTION - TAILORED TO YOUR NEEDS

Ensure operational continuity

With accessible backups in multiple storage locations, you can quickly restore your data after any disruption and maintain high uptime and productivity.

Retain full control

Onsite backup storage not only enables quick recovery, but it also adds security and gives you total control over your data.

Simplify data versioning

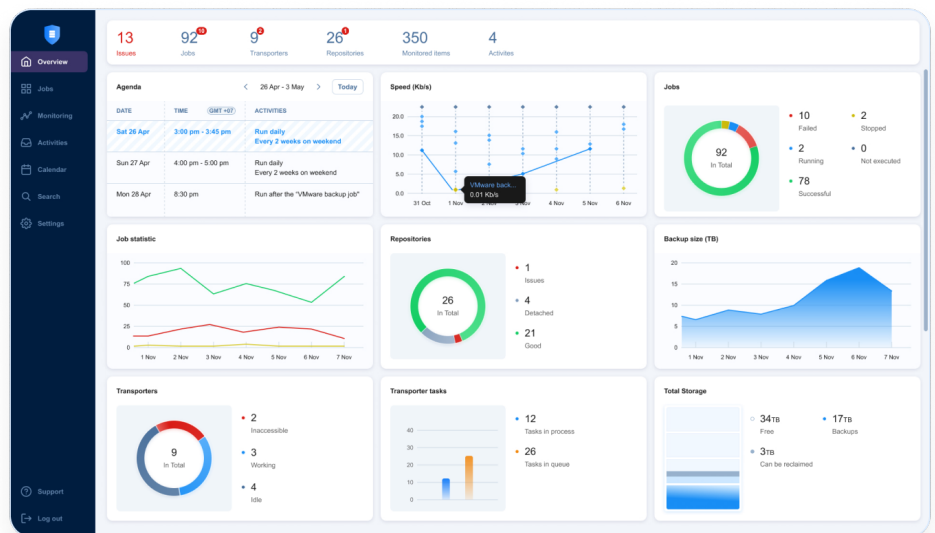

Flexible recovery point retention and rotation settings help you perform point-in-time restores of the exact data version you need.

Streamline archiving and compliance

A well-documented backup framework, supported by long-term retention, instant recovery and advanced search capabilities, helps you meet archiving requirements and fulfill e-discovery requests.

Enhance backup security

With strong data encryption and role-based access controls, you can further safeguard Microsoft 365 backups against unauthorized access and cyber threats.
